

PROPOSAL

Proposal for a Modern Web-Based Business Operations Platform

PREPARED FOR

PocketDevs

[TBD] · [TBD]

PREPARED BY

PocketDevsEric Jeremie Rotaquio · Chief Executive
Officer, PocketDevs

PocketDevs proposes the development of a web-based operations platform designed to centralize users, records, transactions, reporting, and notifications into one secure, easy-to-use system. The goal is to replace manual and fragmented workflows with a single platform that gives administrators and staff clear visibility into day-to-day operations.

The proposed system will be accessible through modern browsers and built with a responsive interface for desktop, tablet, and mobile devices. It will support role-based access, real-time dashboards, searchable data records, transaction tracking, and exportable reports so the client can manage core processes more efficiently.

The solution is structured to be practical and scalable. It includes cloud-hosted deployment, secure authentication, encrypted data handling, automated backups, and a straightforward admin experience that can grow with future operational needs.

01 EXECUTIVE SUMMARY

PocketDevs proposes the development of a web-based operations platform designed to centralize users, records, transactions, reporting, and notifications into one secure, easy-to-use system. The goal is to replace manual and fragmented workflows with a single platform that gives administrators and staff clear visibility into day-to-day operations.

The proposed system will be accessible through modern browsers and built with a responsive interface for desktop, tablet, and mobile devices. It will support role-based access, real-time dashboards, searchable data records, transaction tracking, and exportable reports so the client can manage core processes more efficiently.

The solution is structured to be practical and scalable. It includes cloud-hosted deployment, secure authentication, encrypted data handling, automated backups, and a straightforward admin experience that can grow with future operational needs.

02 SOLUTIONS OUTLINE

The proposed system will provide a practical platform to replace fragmented processes and improve coordination across users, records, transactions, and reporting.

- User registration, login, profile management, and role-based access control
- A dashboard that highlights key metrics, active records, and recent system activity
- Data management tools for create, view, update, delete, search, and filtering operations
- Transaction management with status monitoring and history logs
- Reporting tools with summary and detailed outputs, including PDF and Excel export
- Email and in-system notifications for important actions and status changes
- Cloud deployment, automated backup, and recovery safeguards

03 OBJECTIVES

- Centralize operations into one web-based platform
- Reduce manual processes and duplicate record keeping
- Provide secure access for administrators and staff/users
- Improve reporting visibility and decision-making speed
- Deliver a responsive, maintainable, cloud-hosted system
- Support scalable future enhancements without disrupting existing workflows

04 FULL SCOPE OF WORK

Phase 1: Discovery & Planning

- Confirm workflows, module priorities, user roles, and business rules
- Finalize the implementation plan and delivery sequence
- Define the dashboard, data, transaction, and reporting structure

Phase 2: UI / UX Design

- Create the admin and staff interface layouts
- Design responsive screens for desktop, tablet, and mobile
- Prepare a clear visual hierarchy for data-heavy screens

Phase 3: Core Development

- Build authentication, profile management, and role-based access
- Develop dashboard views for metrics and activity updates
- Implement CRUD-based data management with search and filtering

Phase 4: Transactions & Reporting

- Create transaction workflows, status tracking, and history logs
- Develop summary and detailed reporting features
- Enable export to PDF and Excel

Phase 5: Notifications & Deployment

- Configure email and in-system notifications
- Set up cloud-hosted deployment with backup and recovery
- Deliver source code, documentation, and production handover

05 PROJECT TIMELINE

PHASE	DURATION	KEY MILESTONE
Phase 1: Discovery & Planning	1 week	Approved scope and implementation map
Phase 2: UI / UX Design	1 - 2 weeks	Responsive interface designs
Phase 3: Core Development	2 - 4 weeks	User, dashboard, and data modules
Phase 4: Transactions & Reporting	1 - 2 weeks	Transaction and export features
Phase 5: Notifications & Deployment	1 week	Production release and documentation

Estimated delivery window: 6 to 10 weeks, depending on approvals and final scope confirmation.

06 PROJECT COST

LINE ITEM	BASIS	AMOUNT
Web Application Development	User management, dashboard, data, transactions, reporting, and notifications.	Php 180,000 - 250,000 (estimate)
UI / UX Design and Prototyping	Responsive interface design for desktop, tablet, and mobile.	Included
Testing and Quality Assurance	Functional testing, security review, and user acceptance support.	Included
Project Management and Deployment	Coordination, cloud deployment, and production handover.	Included
Total	Ballpark estimate only, exclusive of VAT and third-party services.	Php 180,000 - 350,000 (estimate)

All amounts are indicative and will be confirmed after the final requirements and implementation sequence are approved.

07 MILESTONES AND PAYMENT TERMS

MILESTONE	%	AMOUNT	TRIGGER
Milestone 1: Project Commencement	50%	Php 125,000 (estimate)	Upon signing and project confirmation
Milestone 2: Mid-Project Delivery	30%	Php 75,000 (estimate)	Upon completion of the core module milestone
Milestone 3: Final Delivery & Acceptance	20%	Php 50,000 (estimate)	Upon final delivery and client acceptance

08 PAYMENT OPTIONS

	Bank of the Philippine Islands (BPI) Bryl Kezter Lim 9939078077
---	--

	GCash Bryl Kezter Lim 09055210329
---	--

- Bank Transfer (PesoNet / InstaPay)
- Company Cheque

09 POST LAUNCH SUPPORT

PocketDevs will provide a defined period of initial support post-launch to help ensure the system runs smoothly after deployment. Ongoing maintenance can be arranged separately if needed.

- 30-day warranty for critical bug fixes and performance issues post-deployment.
- Technical support for critical system outages during the warranty period.
- Minor adjustments to address unforeseen display or functional issues.

10 TERMS AND SERVICES

Confirmation & Payment: A 50% down payment is required to confirm the project and begin work. Implementation starts after the initial payment is received.

Taxes & Expenses: All quoted costs are exclusive of VAT. Third-party services, hosting fees, and other out-of-pocket expenses are billed separately if needed.

Scope Control / Change Requests: The scope is defined by the approved requirements. Any additions or changes must go through a formal change request and may affect cost and timeline.

Intellectual Property & Internal-Use License: Upon full payment, PocketDevs will transfer the agreed software deliverables for internal use, modification, and deployment within the client organization.

Warranty & Support Boundary: PocketDevs includes a 30-day warranty period for critical bug fixes after deployment. Ongoing maintenance or feature enhancements are handled separately.

Validity of Quotation: This quotation is valid until [TBD]. Acceptance after the validity date may require a revised schedule or pricing review.

To proceed, the client may confirm acceptance in writing. PocketDevs will then issue the reservation invoice and schedule a short scoping call to align on timeline, deliverables, and final details.
